Project Title: Improvements of Wadi Crossing in Darsait STP

SCOPE SYNOPSIS

“CONSTRUCTION OF IMPROVEMENTS OF THE WADI IN DARSAIT AREA,” consists of the construction of a 12-cell box culvert and related road crossing the wadi channel in Darsait area. Connected to the box culvert there are floodwalls that will be extended upstream and downstream in other phases of construction works. The work includes also wadi grading and invert protection and the construction of a low flow channel to drain the spring water present all over the year. Throughout the construction period, the contractor shall provide an access Road to the New Darsait STP for the movement of heavy vehicles and equipments.

The Contractor must consider that the culverts and floodwalls are located in proximity of a wadi and the sea and therefore the ground is expected to be saturated and characterized by shallow water table.
